

ARCFLASH nfpa 70E compliance

Arc Flash NFPA 70E Compliance

Training Description:

This one-day seminar is designed specifically for those responsible for making decisions regarding employee safety and regulatory compliance. You will learn what NFPA 70E covers and why everyone is concerned about it. Also, you will learn what options you have when you decide to implement 70E, and what resource commitments you should anticipate.

You will be instructed by some of the same compliance experts who have been hired by companies such as Philip-Morris, Siemens, and many others to design corporate-wide 70E compliance programs. This program is designed to answer the questions you have about 70E, not to sell you new circuit breakers or maintenance contracts as so many others are trying to do. There will be ample time for questions and answers. This may be the most important seminar you attend this year!

Training Topics:

- Is compliance with NFPA 70E mandatory?
- What are Arc Flash Hazards and Shock Hazards?
- What is a Flash Hazard Analysis?
- What is Personal Protective Equipment (PPE) clothing and do your employees need it?
- What are your options to reduce hazard risk levels?
- What is the cost of NFPA 70E implementation?
- What are the potential problems with implementation?
- What are the benefits of implementation?
